CSE 4107 (Quiz#3)
Total Marks: 20
Time 20 minutes

Student ID: _____

Q1 Write a user-defined function named *sortString* that accepts a 2D character array of dimensions 10×50 as argument. The array will contain 10 strings containing only uppercase letters. The function should sort the strings of the array in lexicographical (dictionary) order. 10

Explanation:

Consider the following array of size 3x10:

H	E	L	L	O					
W	O	R	L	D					
E	N	D							

The sorted array will be:

E	N	D							
H	E	L	L	O					
W	O	R	L	D					

Q2 Write a user-defined function that takes two integer arrays and their respective sizes as arguments. The first array consists of random numbers, while the second array contains specific indices referring to elements in the first array. The function should split the elements of the first array into two parts based on the given indices and **return** the difference between the sums of these two parts. 10

Explanation:

First Array: (size 7):

1	5	7	2	0	4	2

Second Array: (size 3):

0	2	4

Sum of the elements from index 0, 2, and 4 is: 1+7+0 = 8
Sum of the elements from the rest of the index is: 5+2+4+2 = 13
So, the difference is: 13-8 = 5
