Chapter 6
Loops

CSE 4107 : Structured Programming I
REYNEP

6.1. The `while` statement

```c
#include <stdio.h>

int main(void)
{
    int i = 0;
    while (i < 10)       /* ctrl-expr */
    {
        printf("%d\n", i);  // Loop-Body
        i++;                // Loop-Body
    }
}
```

The **while** statement

- *has the form*
  - `while ( expression ) statement`
- *is the easiest way to set up a loop*
