Sustainability and **Sustainable Development**

"Sustainable development meets the needs of the present without compromising the ability of future generations to meet their own need"

The World Commission on Environment and Development, United Nations, 1987

Arises many questions....what will we need?

We do know that we are using resources very fast

7

Sustainability and Sustainable Development

Sustainability

Stocks and Flow — Exp.; expenses ≤ income

Development

Well-being — Can mean different things to different people

Comfort, happiness, health

Inhere rent Challenge

Sustainability and Sustainable Development

The Parable of the Elephant and 3 Blind Men

Multiple perspectives are required to understand

9

Sustainability and Sustainable Development

Often sustainability viewed as a balance between **Economy**, **Environment** and **Society** – **traditional model**

False Notion
-Economic activity outside the environment
- inherent competition
- separate goals

Alternative Model
- One environment
- society develops inside the env.
- Economic activity

Sustainability and **Sustainable Development**

5 Important Measures for Sustainable Development

(i) Technology:
Using appropriate technology is one which is locally adaptable, eco-friendly, resource efficient and culturally suitable.

This concept is known as "design with nature"

Sustainability and Sustainable Development

5 Important Measures for Sustainable Development

(ii) Reduce, Reuse, and Recycle Approach:
The 3-R approach advocating minimization of resource use, using them again and again instead of passing it on to the waste stream.

(iii) Promoting Environmental Education and Awareness:
Making environmental education the centre of all learning process will greatly help in changing the thinking pattern and attitude of people towards our earth and the environment.

feeling of belongingness to earth

'Earth thinking'

Environmental Stewardship

Principles of Environmental Stewardship

Core Principle 1: Resource Conservation – making the most efficient use of resources (materials, energy and water) through:

- Energy Efficiency and Conservation
- Water Efficiency and Conservation
- Solid Waste Management and Conceptualizing Waste as a Resource

Core Principle 2: Pollution Prevention – minimizing contamination of the environment by chemicals or other materials through:

- Vehicle/Fleet Management
- Management of the Use of Chemicals and Other Hazardous Substances

Core Principle 3: Occupational Health and Safety

- Managing Indoor Air Quality
- Comfort and Productivity in the Workplace
- Emergency and Disaster Management

Environmental Justice and Equity

Meaningful involvement means

- people have an opportunity to participate in decisions about activities that may affect their environment and/or health;
- the public contribution can influence the regulatory agency's decision;
- their concerns will be considered in the decision making process; and
- the decision makers seek out and facilitate the involvement of those potentially affected.

Climate and Climate Change
Seven Theories of Climate Change
1. Anthropocentric Global Warning Theory
2. Bio-thermostat Theory of Climate Change
3. Cloud Formation and Albedo
4. Human Forcing Besides Greenhouse Gases
5. Ocean Current
6. Planetary Motion
7. Solar Variability
